Project Name	**FARMER INSURANCE CHAIN**

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – thatbridges the gap between business problems and technology solutions. Its goals are to:

- **Find the best tech solution to solve existing business problems.**

- **Describe the structure, characteristics, behavior, and other aspects ofthe software to project stakeholders.**

- **Define features, development phases, and solution requirements.**

- **Provide specifications according to which the solution is defined, managed, and delivered.**
